

In the Abstract:

~~The present invention teaches a~~ A road delineator, ~~which~~ includes an upright sidewall having circular cross-section, and ~~at a lower end thereof,~~ an outwardly extending support flange at a lower end for standing the apparatus in an upright attitude. ~~The~~ An upper end of the sidewall engages an elongated donut-shaped rim defining a vertical aperture. A mushroom shaped, and upwardly directed, tie-on terminal is mounted within the vertical aperture. A circular weighting member engages with the support flange for holding the delimiter in the upright attitude. A warning tape may be strung between ~~the~~ plural of these road delimiters to form a hazard boundary.
